

# Chapter X

## Exercise 07 : ft\_advanced\_sort\_string\_tab

	Exercise 07
ft_advanced_sort_string_tab	
Turn-in directory : <i>ex07/</i>	
Files to turn in : <code>ft_advanced_sort_string_tab.c</code>	
Allowed functions : None	

- Create the function `ft_advanced_sort_string_tab` which sorts, depending on the return of the function given as argument
- The sorting will be performed by exchanging the array's pointers.
- `tab` will be null terminated
- Here's how it should be prototyped :

```
void ft_advanced_sort_string_tab(char **tab, int(*cmp)(char *, char *));
```

Calling `ft_advanced_sort_string_tab()` with `ft_strcmp` as a second argument will return the same result as `ft_sort_string_tab()`.
