Chapter XIV

Exercise 11 : ft_putstr_non_printable

	Exercise 11	
	ft_putstr_with_non_printable	
Turn-in directory : *ex11/*		
Files to turn in : `ft_putstr_non_printable.c`		
Allowed functions : `write`		

- Create a function that displays a string of characters onscreen. If this string contains characters that aren't printable, they'll have to be displayed in the shape of hexadecimals (lowercase), preceded by a "backslash".

- For example :

```
Coucou\ntu vas bien ?
```

- The function should display :

```
Coucou\0atu vas bien ?
```

- Here's how it should be prototyped :

```
void        ft_putstr_non_printable(char *str);
```
